According to our (Global Info Research) latest study, the global Quartz Flexible Accelerometer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

With the development of low-cost inertial systems, new non-liquid floating so-called dry accelerometers started to appear in the mid-1960s. Since these instruments use flexure support technology, they are called quartz flexure accelerometers and their structure and process are greatly simplified. Currently these quartz flexural accelerometers are widely used in all kinds of modern inertial systems.
