According to our (Global Info Research) latest study, the global Quartz Lyot Depolarizer market size was valued at US\$ 144 million in 2024 and is forecast to a readjusted size of USD 212 million by 2031 with a CAGR of 5.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The Quartz Lyot Depolarizer consists of two quartz crystal wedges, one of which is twice as thick as the other, and converts a polarized beam into a pseudo-randomly polarized beam. For a linearly polarized beam from a monochromatic source, the output beam is converted into a pseudo-depolarized beam, whose polarization state varies spatially. A linearly polarized beam from a broadband source passes through a Quartz Lyot Depolarizer, and its polarization state varies both spatially and over wavelength.
