Abstracts

The global Quenching Oil market size is expected to reach \$ 1320 million by 2032, rising at a market growth of 2.1% CAGR during the forecast period (2026-2032).

In materials science, quenching is the rapid cooling of a workpiece in water, oil or air to obtain certain material properties. A type of heat treating, quenching prevents undesired low-temperature processes, such as phase transformations, from occurring. It does this by reducing the window of time during which these undesired reactions are both thermodynamically favorable, and kinetically accessible; for instance, quenching can reduce the crystal grain size of both metallic and plastic materials, increasing their hardness.

Quenching oil should have the following characteristics: higher flash point to reduce the risk of fire; lower viscosity, to reduce the oil attached to the workpiece caused by the loss; not easy oxidation, stable performance, to slow down the aging and prolongation Service life.

Global Quenching Oil key players include Gulf Oil-Houghton, Idemitsu Kosan, CPC, etc. Global top three manufacturers hold a share over 25%.

North America is the largest market, with a share about 30%, followed by China and Europe, both have a share about 28 percent.

In terms of product, Ordinary Quenching Oil is the largest segment, with a share over 40%. And in terms of application, the largest application is Metallurgical Industry, followed by Transportation, etc.
