According to our (Global Info Research) latest study, the global Quenching Oil market size was valued at USD 1070.1 million in 2023 and is forecast to a readjusted size of USD 1238.1 million by 2030 with a CAGR of 2.1% during review period.

In materials science, quenching is the rapid cooling of a workpiece in water, oil or air to obtain certain material properties. A type of heat treating, quenching prevents undesired low-temperature processes, such as phase transformations, from occurring. It does this by reducing the window of time during which these undesired reactions are both thermodynamically favorable, and kinetically accessible; for instance, quenching can reduce the crystal grain size of both metallic and plastic materials, increasing their hardness.

Quenching oil should have the following characteristics: higher flash point to reduce the risk of fire; lower viscosity, to reduce the oil attached to the workpiece caused by the loss; not easy oxidation, stable performance, to slow down the aging and prolongation Service life.

Global Quenching Oil key players include Gulf Oil-Houghton, Idemitsu Kosan, CPC, etc. Global top three manufacturers hold a share over 25%.
