In order to improve the efficiency of the production line and reduce costs, the function of the robot can be diversified through the replacement of the handle/tool. The quick changer (automatic hand-changing device at the end of the robot) is a device that automatically replaces the handle or tool of the robot or automatic machine. Since a single robot performs multiple tasks, it is possible to realize the diversification of the functions of the robot, shorten the work preparation time, and contribute to the multi-variety and small-batch production.
