Quick Changers for End of Arm Tooling (EOAT) are mechanical devices that enable robots to swiftly and accurately switch between different tools or end-effectors, such as grippers, welders, or sanders, without manual intervention. These systems typically consist of two mating components: a master side attached to the robot arm and a tool side connected to the end-effector. The quick changer facilitates the transfer of utilities like electrical signals, pneumatic, or hydraulic connections between the robot and the tool, ensuring seamless operation. By allowing rapid tool changes, quick changers enhance the flexibility and efficiency of robotic systems, particularly in applications requiring frequent tool swaps.
