According to our (Global Info Research) latest study, the global Quick Hitch for Excavators market size was valued at USD 469.2 million in 2023 and is forecast to a readjusted size of USD 610.3 million by 2030 with a CAGR of 3.8% during review period.

A quick hitch for excavators, also known as a quick coupler or quick attach, is a device used to quickly and easily change excavator attachments. It is typically mounted on the end of the excavator's arm and allows for the rapid switch between various buckets, breakers, grapples, thumbs, and other attachments.

A quick hitch consists of a main body with two sets of pins or hooks that can be hydraulically or mechanically operated. The excavator's attachment has corresponding lugs or pin holes that securely attach to the quick hitch. By activating the hydraulic or mechanical system, the pins or hooks connect or disconnect, allowing for the attachment to be quickly swapped. The use of a quick hitch significantly improves productivity and efficiency on construction and excavation sites. It eliminates the time-consuming process of manually changing attachments, enhancing the versatility of the excavator. However, it is important to ensure proper alignment and secure connection when using a quick hitch to ensure safety and prevent accidents.
