According to our (Global Info Research) latest study, the global R-2R DAC market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

An R-2R type digital-to-analog converter is an electronic device that converts digital signals into analog signals. It consists of a series of resistors, one half of which has twice the resistance of the other half. These resistors are connected into a resistor network to form a binary weighted resistor. When a digital signal is applied across these resistors, the resistors produce a corresponding voltage output according to the principle of binary weighting, thereby generating an analog signal.

The advantage of the R-2R digital-to-analog converter lies in its simple structure, high speed, high precision and low cost. It is widely used in fields such as audio equipment, measurement equipment, communication equipment and control systems.
