According to our (Global Info Research) latest study, the global Rabbit Antibody Service market size was valued at US\$ 2468 million in 2024 and is forecast to a readjusted size of USD 3610 million by 2031 with a CAGR of 5.6% during review period.

Rabbit Antibody Service is a comprehensive solution provided by biotech companies and research institutions in the field of immunology. This service centers around the use of rabbits as a source for generating antibodies. Rabbits are highly suitable for antibody production due to their robust immune responses and the ability to recognize a wide variety of antigens. The service usually starts with the selection of an appropriate antigen, which could be a protein, peptide, or other biological molecule. This antigen is then injected into rabbits to stimulate their immune systems. Over time, the rabbits' immune cells produce antibodies against the antigen. Service providers then harvest these antibodies, either through traditional methods like serum collection or more advanced techniques such as the generation of monoclonal antibodies. After extraction, the antibodies are purified to remove impurities and characterized to determine their specificity, affinity, and other important properties. These rabbit - derived antibodies are essential tools for researchers in diverse areas. They are widely used in immunological assays like ELISA (Enzyme - Linked Immunosorbent Assay) for quantifying proteins, immunohistochemistry to study the localization of proteins in tissues, and Western blotting for protein identification and analysis. Additionally, they play a crucial role in drug development, diagnostic test creation, and understanding disease mechanisms, making Rabbit Antibody Service an integral part of modern life - science research and biotechnological applications.
