The global Rabies Immune Globulin (Human) market size is expected to reach \$ 2007.6 million by 2029, rising at a market growth of 3.8% CAGR during the forecast period (2023-2029).

The market for Rabies Immune Globulin (Human) is primarily driven by the incidence of rabies in different regions of the world. According to the World Health Organization, rabies is present in more than 150 countries, with an estimated 59,000 human deaths annually. The majority of these deaths occur in Asia and Africa, where access to post-exposure prophylaxis may be limited.

In addition, the market for Rabies Immune Globulin (Human) is also influenced by government policies and regulations related to rabies prevention and control. Many countries have established national vaccination programs and guidelines for post-exposure prophylaxis, which may include the use of Rabies Immune Globulin (Human).

Overall, the market for Rabies Immune Globulin (Human) is expected to continue to grow as awareness of rabies and the importance of post-exposure prophylaxis increases, particularly in regions with high incidence of the disease.
