Abstracts

Hot-melt tires refer to tires that, as they rub against the road surface during use, the tread temperature rises and melts itself into a gel state. In this state, hot-melt tires can provide excellent grip for the vehicle. The disadvantages are also conceivable. In the melted state, the tires wear very quickly. Therefore, hot-melt tires are mostly used in situations that require high grip but do not consider cost, such as track racing. Tires whose surface melts or is called a gel state at a certain temperature are hot-melt tires.
