Abstracts

The racing tires are the specialized tires, which find major application in auto racing and motorcycle racing. All car tires are built keeping in mind the tire performance, however there are a few differences such as durability, material used, the air filled inside the tire and other features that make racing car tires stand out from other tires. Racing tires are designed specifically to deliver superior performance, and, hence, they undergo various quality, durability, speed, and other tests. Despite the use of natural and synthetic rubber as the primary raw material, a significant extent of textile reinforcements such as rayon, aramid, nylon, and polyester are also used for optimizing the tire performance.
