Abstracts

According to our (Global Info Research) latest study, the global Rack Manifold for Liquid Cooling System market size was valued at US\$ 211 million in 2025 and is forecast to a readjusted size of US\$ 421 million by 2032 with a CAGR of 6.7% during review period.

In 2025, global Rack Manifold for Liquid Cooling System production reached approximately 9,760 units with an average global market price of around US\$ 21,000 per unit, and a gross profit margin of approximately 20%-40%. Rack Manifolds for liquid cooling systems are rack-level distribution assemblies that route supply and return coolant to multiple servers or cold plates within a rack. They typically include supply/return headers, ports with dripless quick disconnects, isolation and balancing valves, flow meters, temperature/pressure sensors, air-bleed and drain functions, and mounting hardware. By centralizing distribution, manifolds simplify installation, enable consistent flow control, and support modular scaling of direct-to-chip liquid cooling. They also improve serviceability by allowing hot-swap of cooled nodes while maintaining stable rack hydraulics and minimizing downtime and leak risk. The industrial chain of Rack Manifolds includes upstream stainless steel or copper tubing, manifolds and fittings, valves, quick disconnect couplings, seals, filters, sensors, flow meters, insulation, brackets, and control wiring. Midstream integrates mechanical design, welding/brazing or machining, surface treatment, leak testing, pressure testing, cleaning and passivation, assembly of instrumentation, and quality inspection for compatibility and cleanliness. Downstream users are liquid-cooled server OEMs, rack integrators, data center operators, and colocation facilities deploying direct-to-chip or cold-plate loops. Supporting services include commissioning, flushing, water-quality management, maintenance, and spare parts.
