According to our (Global Info Research) latest study, the global Rack and Chassis Manifold market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Rack and chassis manifolds are coolant distribution systems for servers and data centres, primarily made of stainless steel. They are designed to efficiently distribute coolant to multiple cooling components within the server to ensure efficient thermal management and a stable operating environment. Manifolds typically include multiple inlets and outlets to accommodate different cooling needs. Key upstream raw materials are stainless steel and sealing materials such as EPDM and PTFE. Downstream customers mainly include large-scale data centre operators, cloud service providers, computer hardware manufacturers, and research institutions, all of which require efficient cooling solutions to safeguard equipment performance and reliability. Currently, as the demand for high-performance computing and cloud computing continues to grow, liquid cooling technology is becoming an important cooling solution for data centres. Stainless steel rack and chassis manifolds are favoured by the market due to their excellent corrosion resistance and mechanical strength.
