According to our (Global Info Research) latest study, the global Radar Microwave Detectors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The radar microwave detector is a detector that combines microwave receiving and transmitting equipment, and its working principle is based on the Doppler effect. The wavelength of microwave is very short, between 1mm and 1000mm, so it is easily reflected by objects. The Doppler effect will occur when the microwave signal is reflected by a moving object, that is, the frequency of the reflected microwave signal and the transmitted wave signal will have a slight shift.
