## Abstracts

According to our (Global Info Research) latest study, the global Radar Sensor market size was valued at USD 8949.3 million in 2023 and is forecast to a readjusted size of USD 18140 million by 2030 with a CAGR of 10.6% during review period.

A radar sensor is an electronic device that identifies the position and velocity of a distant object such as a vehicle, aircraft, or ship. Radar sensors identify electromagnetic emissions with the help of radio receivers. When the transmission is detected, the person in the vehicle is informed. Currently, the GPS technology is installed into radar sensors, and it aids the storage of locations indicated by the sensor when the user reaches their destination in addition to detecting objects, the radar sensors provide information such as range, speed, direction, and Doppler velocity.

North America is expected to hold the largest share of the radar sensor market in 2023; the market in APAC is expected to grow at a high rate between 2018 and 2023.
