Abstracts

A radar sensor is an electronic device that identifies the position and velocity of a distant object such as a vehicle, aircraft, or ship. Radar sensors identify electromagnetic emissions with the help of radio receivers. When the transmission is detected, the person in the vehicle is informed. Currently, the GPS technology is installed into radar sensors, and it aids the storage of locations indicated by the sensor when the user reaches their destination in addition to detecting objects, the radar sensors provide information such as range, speed, direction, and Doppler velocity.
