The global Radar Speed Signs market size is expected to reach \$ 301 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

Radar Speed Signs, also known as driver feedback signs or radar speed display signs, are electronic traffic safety devices that use Doppler radar technology to detect the speed of approaching vehicles and display it in real time on a digital LED screen. Typically installed along roadsides, school zones, construction areas, and residential streets, these signs alert drivers when they exceed the speed limit by flashing their current speed or warning messages. Unlike traditional enforcement cameras, radar speed signs are primarily preventive and educational tools designed to encourage voluntary speed reduction, improve driver awareness, and enhance road safety without issuing fines. In 2025, global Radar Speed Signs production reached approximately 229 k units, with an average global market price of around US\$1010 usd per unit. The production capacity for Radar Speed Signs 2025 was approximately 250 k units. The typical gross profit margin for Radar Speed Signs between 20% and 40%.
