The global Radar Systems market size is expected to reach \$ 29770 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

Radar is an object-detection system that uses radio waves to determine the range, angle, or velocity of objects. It can be used to detect aircraft, ships, spacecraft, guided missiles, motor vehicles, weather formations, and terrain. A radar system consists of a transmitter producing electromagnetic waves in the radio or microwaves domain, a transmitting antenna, a receiving antenna (often the same antenna is used for transmitting and receiving) and a receiver and processor to determine properties of the object(s). Radio waves (pulsed or continuous) from the transmitter reflect off the object and return to the receiver, giving information about the object's location and speed.

Global Radar Systems key players include Lockheed Martin, Raytheon, Northrop Grumman, etc. Global top three manufacturers hold a share over 30%.

North America is the largest market, with a share about 40%, followed by Europe, and China, both have a share over 35 percent.

In terms of product, Pulsed Radar is the largest segment, with a share over 80%. And in terms of application, the largest application is Long Range Radars, followed by Medium Range Radars, etc.
