According to our (Global Info Research) latest study, the global Radial Aluminum Electrolytic Capacitors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A radial aluminum electrolytic capacitor is a type of capacitor that uses aluminum as the anode, with an oxide layer as the dielectric material, and a liquid or solid electrolyte as the cathode. These capacitors are known for their high capacitance values and are commonly used in applications that require high energy storage, such as power supplies, voltage regulation, and filtering. Radial aluminum electrolytic capacitors are named after their construction, which features the leads of the capacitor radiating out from the body of the capacitor in a radial direction. This type of capacitor is typically cylindrical in shape and can be surface-mounted or through-hole mounted, depending on the design requirements of the application.
