According to our (Global Info Research) latest study, the global Radial Blowers with High Pressure for Ventilator market size was valued at US\$ 394 million in 2025 and is forecast to a readjusted size of US\$ 517 million by 2032 with a CAGR of 3.9% during review period.

In 2025, the global production volume of Radial Blowers with High Pressure for Ventilator reached approximately 4.5 million units, with an average selling price of US\$85 per unit, production capacity of approximately 5.5 million units, and gross margin of 32%.

Radial Blowers with High Pressure for Ventilator are specialized airflow driving components used in medical respiratory equipment. By using high-speed rotating impellers, these blowers generate high static pressure and stable airflow to provide continuous and precise air delivery for ventilators. These blowers typically adopt brushless DC motor technology and feature high efficiency, low noise, compact design, and long-term continuous operation capability. They are widely used in non-invasive ventilators, invasive ventilators, and home respiratory therapy devices to meet requirements for pressure control, airflow regulation, and operational reliability.

The upstream industry mainly consists of motor manufacturers, permanent magnet material suppliers, engineering plastic and metal component suppliers, electronic control component suppliers, and precision mold manufacturers, which provide essential components and manufacturing capabilities for high-pressure radial blowers. The midstream includes specialized blower manufacturers and medical component suppliers that produce ventilator-grade blowers through impeller design, motor control,

airflow optimization, and system integration technologies. The downstream applications mainly include ventilators, CPAP/BiPAP devices, home respiratory therapy equipment, and other medical airflow delivery systems, serving hospitals, home healthcare, and long-term respiratory disease management scenarios.
