## Abstracts

The global Radial Carbon Seal market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Radial carbon seal is a type of sealing mechanism used to prevent fluid or gas leakage in rotating machinery. It consists of carbon rings or segments that are mounted in a radial configuration within the sealing assembly. The carbon seals provide a high level of sealing effectiveness by creating a close contact with the rotating shaft, minimizing leakage and reducing friction between the rotating and stationary components.
