The global Radial Glass Sealed NTC Thermistors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Radial Glass Sealed NTC Thermistors are packaged in glass, mainly single-ended radial glass-sealed NTC thermistors. The change in its resistance value may be caused by changes in the external ambient temperature, or may be caused by self-heating due to current flow. It is a heat-sensitive semiconductor resistor whose resistance value decreases as the temperature increases. Roughly 10 times the temperature coefficient of metal resistance.
