According to our (Global Info Research) latest study, the global Radial Leaded Inductor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A radial leaded inductor is a type of inductor that has its leads (terminals) positioned radially or perpendicularly to the axis of the inductor. Unlike axial leaded inductors, which have leads positioned along the axis of the component, radial leaded inductors have their leads coming out of the sides or bottom of the component body.

Radial leaded inductors are available in various sizes and shapes, typically with a cylindrical or rectangular body. They are commonly used in electronic circuits for applications such as filtering, energy storage, power supply regulation, and signal conditioning.
