Abstracts

The global Radial Leaded Inductor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A radial leaded inductor is a type of inductor that has its leads (terminals) positioned radially or perpendicularly to the axis of the inductor. Unlike axial leaded inductors, which have leads positioned along the axis of the component, radial leaded inductors have their leads coming out of the sides or bottom of the component body.

Radial leaded inductors are available in various sizes and shapes, typically with a cylindrical or rectangular body. They are commonly used in electronic circuits for applications such as filtering, energy storage, power supply regulation, and signal conditioning.
