## Abstracts

According to our (Global Info Research) latest study, the global Radial Leaky Coaxial Cable for Coal Mines market size was valued at US\$ 177 million in 2025 and is forecast to a readjusted size of US\$ 255 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global production of radial leaky coaxial cable for coal mines reached 98,310 kilometers, with an average selling price of US\$1.75 per meter. Radial leaky coaxial cable for coal mines, often referred to as "leaky feeder" in coal industry standards, is a special communication cable designed specifically for the enclosed and complex electromagnetic environments of coal mine tunnels and other similar locations. Its core function is to act as both a transmission line and an antenna. While transmitting radio frequency signals longitudinally, the cable also radiates signal energy controllably into the surrounding space through periodically opened slots, gaps, or braided structures on the outer conductor, forming a continuous electromagnetic field distributed along the cable axis. This achieves signal coverage and reception for mobile terminals, fundamentally solving the problems of high attenuation and numerous blind spots in underground tunnels. It serves as the "blood vessels" and "nerves" for underground wireless communication, personnel and equipment positioning, monitoring, and emergency communication and rescue support. The upstream of the industry chain includes copper/copper-clad aluminum conductors, foamed dielectric and sheath materials, metal outer conductor strips (corrugated copper tubes/braided shielding, etc.), slotting/perforation and cabling equipment, connectors/couplers/terminal devices and installation accessories; the midstream involves leaky cable manufacturing (coupling loss/attenuation consistency control, wear resistance, corrosion resistance and flame retardancy, quality inspection and factory calibration) and system delivery

with line amplifiers, distributors/power dividers and combiners, head-end radio frequency sources/base stations, network management and testing and acceptance; the downstream involves coal mine safety and intelligent transformation operation and maintenance units. Gross profit margin is approximately 15%–35%.
