Abstracts

According to our (Global Info Research) latest study, the global Radial Leaky Coaxial Cable market size was valued at US\$ 734 million in 2025 and is forecast to a readjusted size of US\$ 1095 million by 2032 with a CAGR of 5.9% during review period.

In 2025, global production of radial leaky coaxial cable reached 396,120 kilometers, with an average selling price of US\$1.8 per meter. Radial leaky coaxial cable is a specially designed high-frequency transmission line. By periodically creating slots of specific sizes and spacing on the outer conductor, the cable can transmit signals axially while simultaneously radiating a portion of electromagnetic energy into external space in a controlled manner, or receiving electromagnetic signals from external space. It functions as both a transmission line and a continuous antenna, and is used in mines, highway/railway/subway tunnels. Wireless coverage in enclosed or long spaces such as tunnels, oil and gas/chemical plants, etc. The upstream of the industry chain includes copper/copper-clad aluminum conductors, foamed dielectric and sheathing materials, metal outer conductor strips (corrugated copper tubes/braided shielding, etc.), slotting/perforation and cabling equipment, connectors/couplers/terminal devices and installation accessories; the midstream involves leaky cable manufacturing and performance calibration (coupling loss/attenuation/consistency) and its integration with line amplifiers, distributors, power dividers and combiners, head-end base stations/RF sources and network management software to form a "leaky cable communication system"; the downstream enters the mining communication system integrator, rail... Contractors specializing in tunnel electromechanical engineering, and integrators of emergency communications and industrial private networks. Gross profit margin approximately 15%–35%.
