Abstracts

The global Radial Low-Loss Leaky Coaxial Cable market size is expected to reach \$ 1095 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

In 2025, global production of radial low-loss leaky coaxial cable reached 396,120 kilometers, with an average selling price of US\$1.8 per meter. Radial low-loss leaky coaxial cable is a specially designed high-frequency transmission line. By periodically creating slots of specific sizes and spacing on the outer conductor, the cable can transmit signals along the axial direction while simultaneously radiating a portion of electromagnetic energy into external space in a controlled manner, or receiving electromagnetic signals from external space. It functions as both a transmission line and a continuous antenna, and is used for wireless coverage in enclosed or long spaces such as mines, highway/railway/subway tunnels, and oil/gas/chemical plants. The upstream of the industry chain includes copper/copper-clad aluminum conductors, foamed dielectric and sheathing materials, metal outer conductor strips (corrugated copper tubes/braided shielding, etc.), slotting/perforation and cabling equipment, connectors/couplers/terminal devices and installation accessories; the midstream involves leaky cable manufacturing and performance calibration (coupling loss/attenuation/consistency), forming a "leaky cable communication system" with line amplifiers, distributors, power dividers and combiners, head-end base stations/RF sources and network management software; the downstream segment includes mining communication system integrators, rail transit and tunnel electromechanical general contractors, and emergency communication and industrial private network integrators. Gross profit margin is approximately 15%–35%.
