According to our (Global Info Research) latest study, the global Radial Outflow Turbine market size was valued at US\$ 348 million in 2024 and is forecast to a readjusted size of USD 506 million by 2031 with a CAGR of 5.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A Radial Outflow Turbine is a type of turbine in which the flow of fluid (usually gas or steam) enters the turbine radially (from the center of the rotor) and exits radially outward, typically at the periphery of the turbine. This is in contrast to axial-flow turbines, where the fluid flows parallel to the axis of rotation.
