According to our (Global Info Research) latest study, the global Radiant Ceiling Panels market size was valued at USD 989 million in 2023 and is forecast to a readjusted size of USD 1064.2 million by 2030 with a CAGR of 1.1% during review period.

This report studies the Radiant Ceiling Panels market. Radiant ceiling panel systems can be used during a building retrofit process while earning points toward LEED certification. Radiant ceiling panels offer temperature gradients so low between ceiling and floor, less than one degree of difference. The heated ceiling panels are heated in one of three ways: water pipes, electric or air flows embedded in the panel. Of these three, electric circuits and water pipes are the most used solution.

Radiant Ceiling Panels industry is concentrated relatively. Currently, there are several producing companies in the world radiant ceiling panels industry. The main market players are Zehnder Group, Messana, SPC, Frenger and Marley Engineered Products, with about 40% market shares.

In consumption market, Europe and North America are the mainly consumption regions due to the bigger demand of downstream applications. These regions occupied 80% of the global consumption volume in total.

Radiant ceiling panels has two types, which include water heating and electric heating. And each type has application industries relatively. With benefits of heating method, the radiant ceiling panels would develop rapidly. So, radiant ceiling panels have a huge market potential in the future. Manufacturers engaged in the industry are trying to produce good property radiant ceiling panels through improving technology.

The major raw materials for radiant ceiling panels are aluminum plate, copper heating pipe, insulation layer, and other components. Fluctuations in the price of the upstream product will impact on the production cost of radiant ceiling panels. The production cost of radiant ceiling panels is also an important factor which could impact the price of radiant ceiling panels.
