Radiant heat shrink tunnel machines are packaging devices that use infrared radiation heating to shrink plastic films around products. By placing products into heat shrink films, the tunnel machine evenly applies heat through efficient infrared radiation, causing the film to tightly shrink around the product, providing protection, sealing, and an aesthetically pleasing finish. These machines are widely used in industries such as food, beverages, cosmetics, and pharmaceuticals, significantly improving production efficiency, enhancing packaging quality, and offering ease of operation. They are versatile, suitable for various shapes and sizes of products.
