According to our (Global Info Research) latest study, the global Radiation-based E-Beam Processing market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Radiation-based E-Beam Processing is a reliable and repeatable method that offers many advantages over other forms of irradiation. It uses a beam of electrons that has been accelerated to nearly the speed of light. Commercial electricity is energy. Therefore, electron beam processing does not require the transportation, handling, storage or removal of any radioactive materials. Additionally, electron beam equipment can be easily turned on and off, resulting in radiation being present only when the system is turned on.
