According to our (Global Info Research) latest study, the global Radiation Dose Monitoring market size was valued at USD 2062.6 million in 2023 and is forecast to a readjusted size of USD 2788.6 million by 2030 with a CAGR of 4.4% during review period.

Radiation Exposure Monitoring is a framework developed by Integrating the Healthcare Enterprise, for utilizing existing technical standards, such as DICOM, to provide information about the dose delivered to patients in radiology procedures, in an interoperable format.

The growing adoption of EHR systems, increasing initiatives for the implementation of health information exchanges (HIEs), growing awareness on radiation safety, increasing radiation exposure to patients, and increasing number of diagnostic imaging exams across the globe are other factors driving the growth of the radiation dose management market. However, the lack of in-house education and training on radiation dose management, lack of understanding amongst physicians and technologists towards dose optimization approaches, and low adoption of radiation dose management solutions in emerging countries are some of the factors restraining the growth of this market.

The Global Info Research report includes an overview of the development of the Radiation Dose Monitoring industry chain, the market status of Radiography (Dosimeters, Area Process Monitors), Angiography (Dosimeters, Area Process Monitors), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Radiation Dose
