The global Radiation Shielding Materials market size is expected to reach \$ 359 million by 2029, rising at a market growth of 3.4% CAGR during the forecast period (2023-2029).

Global key players of Radiation Shielding Materials include Corning, Nippon Electric Glass and Ets-Lindgren, etc. The top three players hold a share about 30%. Asia-Pacific is the largest market, has a share about 35%. In terms of product type, Traditional Lead Shielding is the largest segment, occupied for a share of about 55%, and in terms of application, Medical X-ray Systems has a share about 70 percent.

Radiation shielding is imperative as radiation can be a serious concern in nuclear power facilities, industrial or medical x-ray systems, radioisotope projects, particle accelerator work, and a number of other circumstances. Containing radiation and preventing it from causing physical harm to employees or their surroundings is an important part of operating equipment that emits potentially hazardous rays. Preserving both human safety and structural material that may be compromised from radiation exposure are vital concerns, as well as shielding sensitive materials, such as electronic devices and photographic film.
