## Abstracts

The global Radical Capture Light Stabilizers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Light stabilizer is a chemical substance that can inhibit or weaken the degradation of light on polymer materials and improve the light resistance of polymer materials. It can usually be used together with antioxidants to better inhibit the photooxidative degradation of polymer materials. Light stabilizers can generally be divided into free radical trapping agents (mainly HALS), ultraviolet absorbers (UVA), quenching agents, etc. according to their action mechanism. The principle of the free radical trapping agent is to capture the free radicals generated by the photothermal oxidation of the substrate from N-O<sup>·</sup>, and achieve the goal of light stabilization by inhibiting the photooxidation reaction.

This report studies the global Radical Capture Light Stabilizers production, demand, key manufacturers, and key regions.
