According to our (Global Info Research) latest study, the global Radio Frequency Fractional Carbon Dioxide Laser Generator market size was valued at US\$ 513 million in 2025 and is forecast to a readjusted size of US\$ 625 million by 2032 with a CAGR of 2.9% during review period.

The radio frequency fractional carbon dioxide laser generator, referred to as radio frequency fractional CO₂ laser, uses radio frequency excitation to generate carbon dioxide laser. The laser wavelength it emits is 10600nm, and this wavelength of laser can be well absorbed by water in human tissue. The device acts on the dermis of the skin by generating a tiny beam of light arranged in an array, that is, a dot pattern, to achieve therapeutic and cosmetic effects on the skin. Since the device has the adjustability of various parameters, such as spot diameter, treatment density, treatment depth, treatment energy, etc., it can provide personalized treatment plans for different diseases to achieve the best therapeutic effect.
