According to our (Global Info Research) latest study, the global Radio Frequency, Ultrasonic, Phototherapy & EMS Anti-wrinkle Eye Beauty Device market size was valued at US\$ 98 million in 2025 and is forecast to a readjusted size of US\$ 223 million by 2032 with a CAGR of 6.1% during review period.

In 2025, global production of RF, Ultrasonic, Phototherapy & EMS Anti-wrinkle Eye Beauty Devices reached approximately 1.2 million units. The RF ultrasonic light therapy anti-wrinkle EMS eye beauty device is a multifunctional eye care beauty device that combines radio frequency (RF), ultrasonic technology, light therapy, and EMS (Electrical Muscle Stimulation) technologies. It is mainly used for eye area tightening, wrinkle reduction, puffiness relief, and dark circle improvement. The device typically uses RF energy to stimulate collagen production and tighten the skin, while ultrasonic vibration helps enhance the penetration of skincare ingredients. At the same time, light therapy functions such as red and blue light are used to improve the condition of the skin around the eyes, and EMS microcurrent stimulation helps activate the skin and superficial muscles around the eyes to enhance eye contours and reduce fine lines. Some products also integrate heat therapy, vibration massage, and intelligent temperature control functions to improve treatment comfort and overall care effectiveness. Featuring non-invasive treatment, convenient operation, and suitability for home use, RF ultrasonic light therapy anti-wrinkle EMS eye beauty devices are widely used in home beauty care, skin management centers, and beauty salon eye care applications. As consumer demand for eye anti-aging treatments, intelligent skincare, and portable beauty devices continues to grow, modern products are evolving toward

intelligent operation, multi-mode adjustment, app connectivity, and lightweight designs to improve treatment safety, precision, and personalized user experience.

The RF ultrasonic light therapy anti-wrinkle EMS eye beauty device market has experienced steady growth in recent years, driven by increasing demand for eye-area anti-aging care, the growing popularity of home beauty devices, and rising consumer attention to fine lines, dark circles, and skin laxity around the eyes. As a multifunctional eye care device integrating RF skin tightening, ultrasonic infusion, LED light therapy, EMS microcurrent stimulation, and heat massage functions, it is widely used in home skincare, beauty salons, skin management centers, and auxiliary light medical aesthetic care applications. With consumers placing greater emphasis on safety, convenience, comfort, and visible treatment results, demand continues to increase for features such as intelligent temperature control, multi-level intensity adjustment, low-irritation microcurrent technology, portable design, timer functions, and refined eye-area care capabilities. Meanwhile, social media promotion, growing demand for early anti-aging care among younger consumers, and personalized skincare trends are driving these products toward greater intelligence, multifunctionality, lightweight structures, and more fashionable appearances. In the future, the market is expected to maintain growth potential, while competition will increasingly focus on anti-wrinkle effectiveness, eye-area safety compatibility, energy output stability, wearing and operational comfort, product durability, and brand after-sales service capabilities.
