Radio operated airfield lighting controller is a device used to control the lighting systems at airports or airfields remotely through radio communication. It consists of a controller unit that interfaces with the lighting fixtures and is operated via a radio transmitter. The controller receives signals from the transmitter, enabling the activation or deactivation of various lighting elements on the airfield, such as runway edge lights, taxiway lights, and approach lights. This allows for efficient and flexible control of the lighting system based on airfield operational requirements.
