## Abstracts

According to our (Global Info Research) latest study, the global Radio Over Fiber market size was valued at USD 465.8 million in 2023 and is forecast to a readjusted size of USD 997 million by 2030 with a CAGR of 11.5% during review period.

Radio Over Fiber is a technology that describes the conversion of a Radio Frequency (RF) signal into a Fiber Optic (FO) signal and then back to an RF signal. In Radio Over Fiber architecture, a data-carrying RF (Radio Frequency) signal with a high frequency (usually greater than 10 GHz is imposed on a lightwave signal before being transported over the optical link. Therefore, wireless signals are optically distributed to base stations directly at high frequencies and converted from the optical to electrical domain at the base stations before being amplified and radiated by an antenna. As a result, no frequency up/down conversion is required at the various base stations, thereby resulting in simple and rather cost-effective implementation is enabled at the base stations.

North America is the largest region of Radio Over Fiber, with a market share about 30%, followed by Europe and China, etc. Finisar, HUBER + SUHNER, Emcore, APIC Corporation and Syntronics LLC are the top 5 manufacturers of industry, and they had about 50% combined market share.
