## Abstracts

According to our (Global Info Research) latest study, the global Radioactive Isotopes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A radioactive isotope, or radioisotope, is an unstable form of an element that emits radiation in an attempt to return to a more stable form.

Isotopes are versions of the same element with the same atomic number but a different atomic mass. Stable isotopes have a close enough number of protons and neutrons that the nucleus itself will be balanced.
