Abstracts

The global Radioactive Isotopes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A radioactive isotope, or radioisotope, is an unstable form of an element that emits radiation in an attempt to return to a more stable form.

Isotopes are versions of the same element with the same atomic number but a different atomic mass. Stable isotopes have a close enough number of protons and neutrons that the nucleus itself will be balanced.

This report studies the global Radioactive Isotopes production, demand, key manufacturers, and key regions.
