The global Radioactive Remote Joystick market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Remote Manipulator System (RMS), also known as a robotic arm, is a robotic device used to operate in hazardous environments. It usually consists of a control console and a robotic arm, which can be used for maintenance, cleaning, sampling and other tasks in hazardous locations such as nuclear power plants and chemical plants. RMS is usually composed of multiple joints and can perform motion and positioning in three-dimensional space. Due to its high accuracy and reliability, it is widely used in hazardous environments such as nuclear power plants. Among them, the most famous RMS is NASA's Canadian arm, which is used in the construction and maintenance missions of the International Space Station.
