According to our latest research, the global Radioactive Waste Disposal Options market size will reach USD 4245 million in 2031, growing at a CAGR of 9.8% over the analysis period.

Nuclear waste generally refers to the no longer needed and radioactive waste used in nuclear fuel production, processing and nuclear reactors. It also specifically refers to the spent fuel of nuclear reactors, after reprocessing and recovering usable nuclear materials such as plutonium-239, the remaining uranium-238 and other radioactive wastes that are no longer needed. Disposal is the final step in radioactive waste management. Its purpose is to keep the waste safe by placing it in appropriate containment facilities. These facilities are designed and maintained to provide adequate radiation protection for people and the environment over a long period of time using natural and engineered barriers.
