According to our (Global Info Research) latest study, the global Radioactivity Meter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A radioactivity meter, also known as a radiation detector or Geiger-Muller counter, is a device used to measure the level of radioactivity in a given area or object. It detects and measures ionizing radiation, such as alpha particles, beta particles, and gamma rays, which are emitted by radioactive materials. The meter typically consists of a sensor, such as a Geiger-Muller tube, which detects the radiation, and a display or readout that shows the radiation level in units such as counts per minute (CPM) or microsieverts per hour ($\mu\text{Sv/h}$). Radioactivity meters are commonly used in various fields, including nuclear power plants, medical facilities, environmental monitoring, and research laboratories, to ensure safety and monitor radiation levels.
