The global Radioanalytical Chemistry Services market size is expected to reach \$ 2948 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

To address the problems of insufficient sensitivity, limited accuracy, and difficulties in handling complex samples in traditional chemical analysis, radioanalytical chemistry services have emerged. Since the discovery of natural radioactivity in the early 20th century, this service, relying on the interdisciplinary integration of nuclear science and chemistry, has gradually developed into a key technological support for fields such as nuclear energy development, environmental monitoring, and medical diagnostics. Currently, radioanalytical chemistry services are widely used in nuclear fuel cycle quality control, research on the migration patterns of environmental radionuclides, development of medical radiopharmaceuticals, and tracing of biological metabolic processes.
