According to our (Global Info Research) latest study, the global Radiological (RT) Non-Destructive Testing Service market size was valued at US\$ 1414 million in 2025 and is forecast to a readjusted size of US\$ 2056 million by 2032 with a CAGR of 5.5% during review period.

Industrial radiographic inspection (RT) services are professional technical services provided by third-party service providers with qualified personnel, radiation safety permits, inspection equipment, shielding facilities, and quality management systems. These services utilize X-rays, gamma rays, or high-energy rays to penetrate welds, castings, forgings, composite materials, pressure equipment, pipes, and other industrial components. The internal attenuation differences are recorded using industrial film, computed tomography (CT) imaging panels, digital detectors, real-time imaging systems, or computed tomography systems to identify internal defects such as porosity, inclusions, cracks, incomplete penetration, lack of fusion, shrinkage cavities, corrosion, wall thickness loss, foreign objects, and assembly anomalies.
