Abstracts

According to our (Global Info Research) latest study, the global Radiology PACS System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The advantage of the PACS system lies in its digitization, networking and standardization. Digitization and networking make the storage, transmission and sharing of medical images more convenient and improve medical efficiency. Standardization helps information exchange and sharing between different medical institutions, providing the possibility of telemedicine. The PACS system can also improve the overall informatization level of the hospital by integrating with other medical information systems such as electronic medical record systems and physician order systems.

In the future, the PACS system may further develop into a comprehensive information system containing more functions and services. For example, combined with artificial intelligence technology, the PACS system can achieve more accurate imaging diagnosis and even predict the development trend of diseases. In addition, with the development of the Internet of Medical Things (IoMT), the PACS system may be connected with more medical devices and sensors and become a core component of medical information flow, realizing real-time information sharing and collaboration among patients, hospitals, and doctors Diagnosis and treatment.

However, the development of PACS systems also faces some challenges. For example, ensuring data security and privacy protection are issues that need to be focused on during the operation of the PACS system. In addition, the popularization of the PACS system also needs to overcome the barriers to medical workers' acceptance of new

technologies, as well as the challenges of standardization and interoperability among different medical institutions.

Overall, despite some challenges, the future of PACS systems looks quite promising. With the advancement of technology and the expansion of the market, the PACS system may play a wider and deeper role in the future, providing more efficient and intelligent solutions for the management and diagnosis of medical images.
