A radiopharmaceutical injector is a medical device used to administer radiopharmaceuticals to patients. Radiopharmaceuticals are drugs that contain radioactive isotopes, which emit gamma rays or positrons that can be detected by specialized imaging equipment. These drugs are used in nuclear medicine for diagnostic imaging and therapy.

The radiopharmaceutical injector is specifically designed to safely and accurately deliver these radioactive drugs into the patient's body. It ensures precise control over the injection process, including the injection rate, volume, and timing. This control is crucial to ensure optimal distribution of the radiopharmaceutical within the patient's body and accurate imaging or therapeutic results.
