According to our (Global Info Research) latest study, the global Radiosonde market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Radiosondes are battery-powered telemetry instrument packages that are carried into the atmosphere typically by a weather balloon; they measure altitude, pressure, temperature, relative humidity, wind (both speed and direction), and cosmic ray readings at high altitudes. A class of radiosonde whose position is tracked as it ascends in the atmosphere to give wind speed and direction is referred to as rawindsonde, which is an abbreviation for radar wind sonde. Another class of radiosondes are the ones that are released from airplanes and fall rather than being carried by weather balloons. This class of radiosondes are referred to as dropsondes. Radiosondes play a vital part in most forms of operational atmospheric data assimilation.
