## Abstracts

The global Radiotherapy CT Simulator market size is expected to reach \$ 995 million by 2032, rising at a market growth of 6.9% CAGR during the forecast period (2026-2032).

Radiotherapy CT Simulator refers to a complete X-ray computed tomography system dedicated to simulation and positioning, target delineation, basic imaging for dose calculation, and treatment position reproduction before radiation therapy. Compared with conventional diagnostic CT, such equipment must be optimized around the radiotherapy workflow. It is typically required to be equipped with a flat radiotherapy couch, laser positioning system, extended field-of-view reconstruction, 4D CT/respiratory management, and dedicated software interfaces for RT, and can work cooperatively with TPS, R&V systems, and patient immobilization devices. A Radiotherapy CT Simulator shall meet the requirement of a gantry bore  $\geq$  80 cm to accommodate patient positioning for radiotherapy immobilization, breast boards, vacuum cushions, head-neck-shoulder masks, and large patients, while ensuring geometric accuracy, isocenter transfer accuracy, and positioning reproducibility during scanning. In 2025, global sales volume of Radiotherapy CT Simulators was approximately 582 units, with an average industry price of about 1.07 million US dollars per unit and an average industry gross profit margin of around 46%.

As a core front-end equipment for precise radiation therapy, the market demand for Radiotherapy CT Simulator is closely linked to the popularization of radiation therapy technology, with the industry showing a clear pattern of upgrading and competition. Currently, technological iteration is the core driving force of market development, and intelligence and high precision have become the mainstream direction of product development, with continuous improvement in functional integration and clinical adaptability. The market competition presents a diversified situation. International

brands occupy an advantage in the high-end field relying on technological accumulation, while local brands gradually expand their market influence through technological breakthroughs and scenario adaptation. Policy orientation and clinical needs drive market expansion, and the release of demand at the primary medical end has become a new growth opportunity. Meanwhile, the clinical adaptability of products and the improvement of service systems have become key supports for enterprises' core competitiveness.
